I found a few like at scene. But nothing really good on the market yet. The reason I ask is because I have a bunch of Neo Geo games and nobody has a Neo Geo rip I can do yet. Does anyone have any ideas on how to achieve this? A: If you have the Japanese Power Discs you can play some of the games on your system. While there are games you can't play, there are also a lot of game that you can play and have some fun with. I don't think there is a game that does exactly what you want, but here are some ideas. Extraction - I think this is the best option for what you want, it extracts the ROMs. MySQL - Another option if you have a server on your system. GOM - Another option if you have a server on your system. 3d Trak - This is like GOM in some respects, it doesn't specifically extract the ROMs but it is more complete and I think you could use it if you were willing to devote a lot of time to configuring it and creating tables. of *ABCC1* does not influence the expression of *ABCC1* mRNA

in other tissues. In particular, the abundance of *ABCC1* mRNA in mouse kidney and liver was not affected by the hepatic *Abcc1* deletion ([Figure 5](#gks780-F5){ref-type="fig"}A). This indicates that the other members of the P-gp family do not compensate for the hepatic *Abcc1* deletion. To further evaluate the specific role of *Abcc1* in the mouse kidney, we studied the *Abcc1* expression in the renal tubules using a Cre-Lox system. In our study, we bred *Abcc1^{-/-}* with *Tg-Tubb3^{+/-}* mice (the *Tg-Tubb3^{+/-}* mice express Cre recombinase under the control of the endogenous *Tubb3* promoter). As a result, the Cre recombinase expression was restricted to the renal tubules. In these mice, the kidney-specific deletion of *Abcc1* caused an ~40% reduction in *Abcc1* mRNA levels ([Figure 5](#gks780-F5){ref-type="fig"}B). In this regard, 82157476af
